

ORKIN® VITAL

HELP DISINFECT YOUR BUSINESS TODAY

If you're like most businesses, the coronavirus and COVID-19 has taken a major toll on your ability to serve your customers. It's an unprecedented and extremely stressful time, for businesses especially, and we all need to do our part to help.

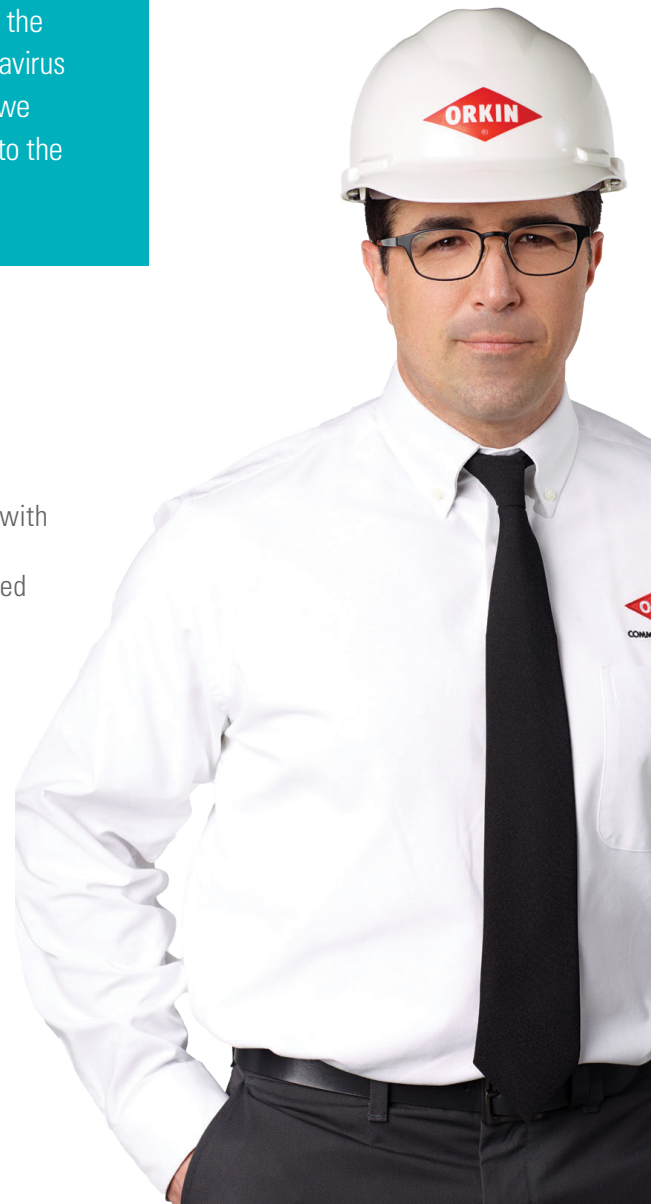

One of the most important things we can do is keep the places where people shop, eat and work as sterile as possible. Orkin® Vital can help protect your business now, and you can choose to keep an ongoing protection program into the future.

BEWARE FALSE CLAIMS

Currently, no service or product has received approval from the Environmental Protection Agency (EPA) for killing the coronavirus that causes COVID-19 (SARS-CoV-2) because it's too new, we use high quality disinfectants that if applied in accordance to the labels can kill up to 99.9% germs and pathogens.

High Quality Disinfectants

The Orkin® Vital service uses high quality products labeled for use against a wide variety of pathogens. When applied in accordance with the label, these disinfectants will kill bacteria and viruses on hard non-porous surfaces. The disinfectant products we use are often used in many different commercial settings including health care.

Applied by Essential Service Professionals You Can Trust

- Orkin is often designated as one of the few “essential service” providers by local governments and we’re able to continue servicing your business during these unprecedented times. We take this responsibility very seriously and feel it’s our duty to do what we can to help our customers.
- Our number one priority is the protection of our employees and customers. We follow the Centers for Disease Control and Prevention (CDC), World Health Organization (WHO), and other local guidelines on social distancing.
- Orkin has more than a century of experience protecting customers and their reputations, so you can rest assured you’ll receive effective service delivered by well-trained technicians.

How It Works

Trained technicians carefully wipe down all high-touch surfaces in a given location, apply a misting application using specialized equipment, and let it dry undisturbed for 10 to 15 minutes or longer according to the label. Once the product application has dried, the label assures effectiveness.

The Orkin® Vital service can be provided after hours or when the building is unoccupied. In 24-hour facilities or other businesses that need to remain open during service, we can designate and treat zones in rotation to allow most operations to continue during the service.

Let's Get Back to Business

There's no silver bullet for stopping the spread of COVID-19 at this point, but Orkin® Vital can help you reduce the risks and restore a safer and healthier environment so you can get back to business.
